Work Experience

Ericsson
Genoa, Italy

Software Designer — *Feb. 2022 - Present*

- Engineered and maintained 2 OSGi bundles for Ericsson's Optical Fronthaul microservice application. Implemented 10+ major features and resolved over 20 critical bugs, resulting in improved application stability and extended functionality for both new and legacy device models. Technologies: Java, Groovy, OSGi Framework, Docker, ConfD, Git, Gradle, Shell Scripting.
- Enhanced Ericsson's 6G network controller by delivering key feature updates and critical bug fixes to existing Spring Boot microservices, directly supporting the robust testing and validation of over 3 advanced next-generation device functionalities in a 6G test-bed.
- Led high-impact automation projects including a suite of tools (utilizing Java, Python, Groovy) that automated previously manual legal documentation for releases, cutting reporting man-hours by 95%, boosting productivity of the team by 30%, and earning the "Ericsson R&D Italy Most Impactful Project 2025" award, and Python scripts that streamlined Ericsson's router configuration, reducing both setup time and first-boot misconfigurations by 90%.
- Developed a mobile application in Flutter, leveraging Bluetooth Low Energy (BLE) to interface with inaccessible telecom devices, enabling remote log retrieval and troubleshooting, thus eliminating the need for technicians to physically access difficult locations decreasing diagnostic times by an average of 1 hour per incident.

Leonardo
Genoa, Italy

Software engineer intern — *Mar. 2021 - Dec. 2021*

- Collaborated with 3 senior software engineers to design and develop a cloud-based technological scenario utilizing Kubernetes, Docker and Ansible, showcased as a master's thesis project, and subsequently integrated into Leonardo's Cyber Range.
- Enhanced proficiency in cloud computing by constructing a simulated Amazon Web Services (AWS) environment, thereby achieving a deeper understanding of cloud infrastructure.
- Actively engaged in hands-on cyber security initiatives, leveraging expertise to emulate vulnerabilities sourced from the Common Vulnerabilities and Exposures (CVE) database. Conducted thorough penetration tests on applications deployed within the simulated Amazon Web Services environment, fortifying security measures and ensuring robust protection against potential threats.

University of Genoa
Genoa, Italy

Tutor — *Jul. 2019 - Jul. 2021*

- Coordinated communication with more than 200 incoming freshmen students to ensure an efficient onboarding process.
- Succeeded in increasing the number of new enrollments in the computer engineering faculty by 8% compared to the previous academic year.

Personal Projects

FitTracker

Google Play Store | Website

- **Cross-platform Mobile Application** developed utilizing Flutter, Dart and Firebase that uses artificial intelligence and computer vision to provide real-time feedback on fitness routines. Key features include precise exercise tracking, form correction guidance, and automatic repetitions counting, allowing users to optimize their workouts and minimize the risk of injury.

Education

University of Genoa
Genoa, Italy

Master's degree in Computer Engineering (MSc) — *Graduated with Honors, Dec. 2021*

- Main Courses: Computer Security, Artificial Intelligence, Distributed Systems, Software Engineering, Operations Research, Virtualization and Cloud Computing, Data Protection and Privacy.

University of Genoa
Genoa, Italy

Bachelor's degree in Computer Engineering (BSc) — *Oct. 2019*

- Main Courses: Data Structures & Algorithms, Databases, Operating Systems, Linear Algebra, Calculus and Analysis, Computer Architecture, Programming Fundamentals.

Skills

Programming	Java, Python, Dart, Groovy, SQL
Frameworks	Spring Boot, Flutter
Platforms & DevOps	Docker, Kubernetes, Ansible, Jenkins
Web Technologies	REST APIs, HTML5, CSS, JavaScript
Databases	MySQL, Firebase
Languages	English, Italian, Albanian
